

Drive Units	1 x 200mm drive unit
Amplifier	100W
Frequency	40Hz to 200Hz
Controls	Volume Phase, variable zero to 180° Crossover frequency, variable 40Hz to bypass
Outputs	Phono line level
Inputs	Phono line level
Voltage	100 to 230V
Fixing	Free standing or wall mountable
Dimensions (mm)	H 323 x W 228 x D 470 (including rear cover)
Weight	12Kg

For applications requiring extended, higher level bass performance, such as an Audio-Visual system playing back film material, the MICROsub II can be added to the main loudspeakers and carefully tuned just to add extended bass and not confuse the critical mid-band.

With all of the MICROseries loudspeakers, aesthetics have been a prime consideration. This starts with the family look, which is softly shaped to merge into the environment. Secondly with the selection of materials, which have to be acoustically excellent but also provide for flexibility of design and quality of appearance. The MICROsub II incorporates a full amp-panel cover to ensure it looks good from all angles and prevent access to controls and electrical connections. It also has a steel mesh grille under the aesthetic cloth cover.

Equally important for aesthetics, and speed and quality of installation, are the fixings and brackets. The MICROsub II is supplied with its own mounting bracket which allows flush mounting to walls or ceilings.
